

ReXamine

VITAMIN, MINERAL AND HEAVY METAL ANALYSIS

The ReXamine uses high-frequency light spectrophotometry to provide a precise analysis of vitamins, minerals & heavy metals in your body tissue. It measures & detects deficiencies and surplus levels, all by scanning the palm of your hand.

RM480 Per Analysis

This Analysis Measures Up To

7

Types of Vitamins

21

Types of Essential Minerals & Trace Elements

15

Types of Heavy Metal Elements

Besides, it provides the following based on data correlations:

- Oxidative stress level and how well our body response to it.
- Risk towards potential health issues:
 - Global heavy metal intoxication
 - Acidosis
 - Predisposition to diabetes
 - Predisposition for allergies
- Risk towards physiology dysfunction of the following:
 - Enzymatic state
 - Intestinal assimilation
 - Metabolism
 - Immune system
 - Cognitive function
 - Hormonal state
 - Tissue repair
 - Emotional state
 - Cardiovascular system
 - Nervous system

Why Should We Do This Analysis?

To Detect Any

- Vitamin and mineral deficiency in your tissue and correct those deficiencies in a more precise measure
- Accumulation of heavy metals in the body

To Check

- If we are in chronic exposure to heavy metal toxicity
- How well our body doing in order to eliminate free radical

Test Uniqueness

Certified Technology

Based on spectroscopy

Pain-free Measurement

No injections or blood taking
